

BASEL P+D BUILDING PROGRAMME

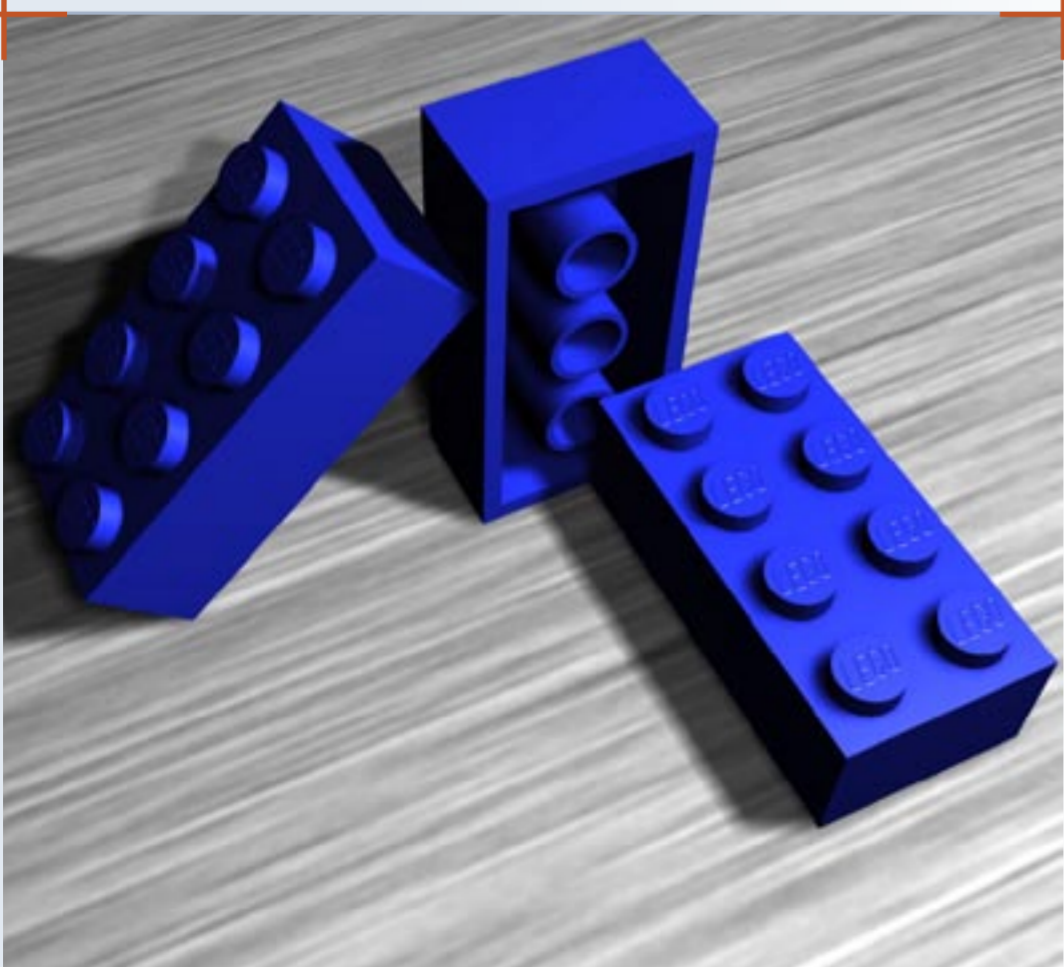

> Basel on the way to a sustainable city

Through the P+D BUILDING PROGRAMME Basel-Stadt promotes forward-looking pilot and demonstration projects in the building sector. The canton together with the ETH domain provides around 1.6 million Swiss francs for the support of P+D model projects up to the end of 2008.

> Wanted: exemplary sustainable solutions in the building sector

The P+D BUILDING PROGRAMME is aimed at strengthening the increasing interest of all actors in viable buildings and building solutions and in this way creating a new culture of innovative planning and construction for a sustainable future in Basel.

> Three categories that receive support

Through the P+D support programme building owners are urged to apply forward-looking solutions both for the overall concept and for selection of the individual components or materials. The three support categories serve the purpose of applying state-of-the-art technologies, also for renewal work, and demonstrating them to interested specialists.
