

PILOT REGION BASEL

> Practice-oriented laboratory for sustainability research

The Canton of Basel-Stadt and Novatlantis are jointly pursuing the path to the 2000-watt society. They support know-how transfer from applied urban development and mobility research into practice while the research makes use of experience gained from practice.

> Interdisciplinary cooperation

The Building and Planning Department as well as the Environment and Energy Department of the Canton of Basel-Stadt, the University of Basel and the Fachhochschule beider Basel work together in the Pilot Region Basel along with Novatlantis and the research institutes –Empa, Eawag, WSL and Paul Scherrer Institute (PSI)– in the ETH domain.

> Erlenmatt and ProVolta urban development projects

Architectural competitions have given rise to large-scale projects on the former DB freight station grounds and along the large construction site for the underground highway (northern expressway) through Quartier St. Johann. These projects provide new impetus for reshaping urban development.
